

RealVision Inc. has been providing DNC and other manufacturing software solutions for industry since 1986. With over 450 companies using RealVision Inc. software we have shown to be a proven leader in the industry. RealVision software is fully expandable providing a tightly integrated solution for your manufacturing environment. The full ProDoc-Tivity suite of products includes:

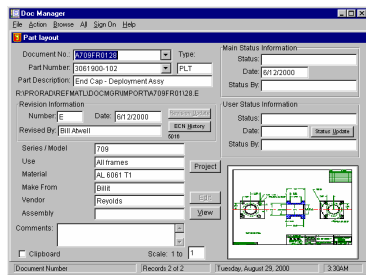

Integrator™ Comprehensive Paperless Mfg. System bringing all the manufacturing information together so the job can be done right the first time!

Powerful database connectivity allows linking of your existing routing, BOM and MRP info with blueprints work instructions and process documentation. Includes work

authoring tools, "smart forms", photo library, tool list authoring and third party file management – CCV version allows ODBC connectivity with Oracle and Microsoft SQL data tables to create client-server environment.

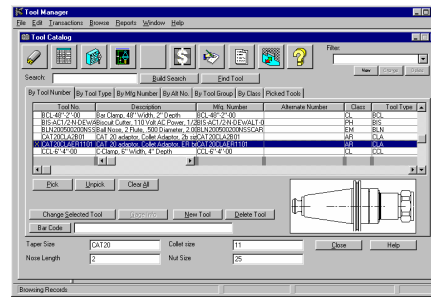

DocManager™ Powerful document control, distribution and engineering change management system.

Features include: document number builder, part to document data basing. Facilitates concurrent engineering. Meets ISO9000 and stringent revision control requirements.

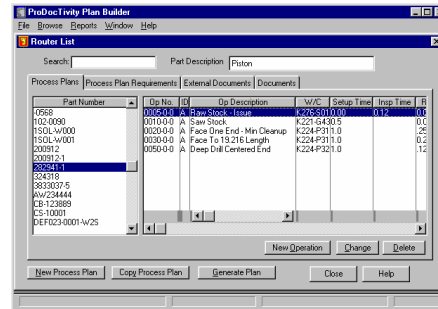

Multi-user, network independent system. Handles the logistics of document distribution (& viewing) and ECN tracking. Works with virtually all CAD systems and other document authoring systems. Available in three versions Oracle, MS SQL or FoxPro.

ToolManager™ Professional Tool & Tool Crib Management System.

Allows full data basing of tool information including: inventory, tool geometry, tool lists and kits, graphics and drawings, tool components, hazardous materials and fixtures. Includes a complete gage management system and powerful purchasing and receiving functions. Has built-in "To-Do" list reminder system. Allows multi-level security and has a full complement of reports. Usage log tracks tools, perishable tooling, fixtures and gages by location, job, user and department. Available in three versions Oracle, MS SQL or FoxPro.

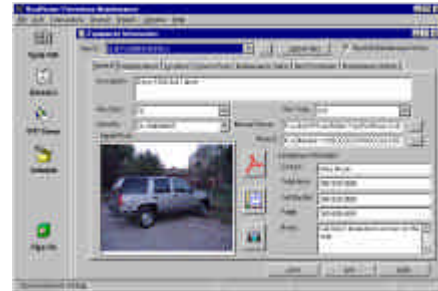

Plan Builder™ Rapid - process plan generation tool.

Plan builder is designed to assist the manufacturing engineer in generating a process plan for the manufacturing of a part, component or assembly. The system allows the user to specify the document requirements of the process plan as well as populate the CAPP data base for part and operation. Export facility allows the router to be

passed to your existing MRP or accounting system. Available in three versions Oracle, MS SQL or FoxPro.

RPM™ Complete maintenance management system.

Database all your company assets then setup all the preventive maintenance procedures to maintain them. RPM schedules the maintenance and tracks all the related costs as well as the service part inventory to keep them to keep the equipment running. Powerful purchasing functions make it easy to control the service part inventory and

order outside maintenance services. The work order system not only facilitates the collection and labor and materials information for scheduled maintenance but also handles all unplanned and emergency service. Available in three versions Oracle, MS SQL or FoxPro.

webDNC™

By RealVision Inc.

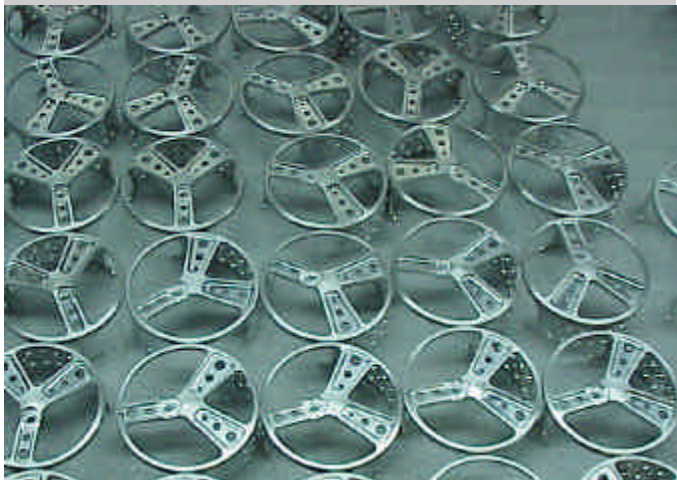

webDNC™ - the Difference

The key to success in any endeavor is managing the details. In the shop this is one of the most important aspects of producing quality parts and delivering them on time. webDnc is much more than just serial communication software - in fact webDNC is designed to work in conjunction with any of the leading DNC communication packages - - - - -

webDNC takes care of the details.

- ?? Program ID Management
- ?? Tool List Generation
- ?? Tool Offset File Generation
- ?? Program Revision Control
- ?? Job Tracking
- ?? Machine Tool Data Collection
- ?? Alarm Monitoring
- ?? Part Router Linking
- ?? Automated Information Logging
- ?? Information Distribution VIA the WEB
- ?? Wireless LAN/DNC Support

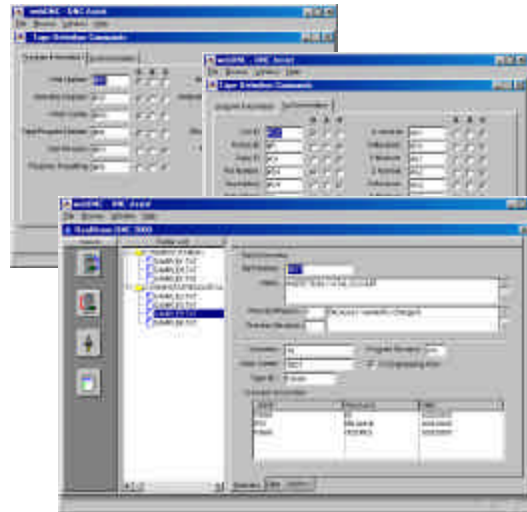

The Details Are Hard To Manage

Even though we all know we can have better control, better parts, better production and less headaches if we have all the details in hand—we still find it hard to take the time to document them. webDNC™ takes most of the work out of the documentation process. This unique ground breaking product does nearly all of the work in the background; you simply view the results!

No Matter How Much Time We Can Save

We Still Put Off What We Can Do Today For Tomorrow

Simplicity is the Key

Define your NC tape in the header and save, copy or drag and drop the file into your input folder, the system does the rest! The information is extracted from your tape file and data based. The file is then moved to the proper send directory for downloading. The detailed info, tool lists etc. can be viewed with the Internet/Intranet Explorer . Not only can the Tape definition info be accessed, but you will be able to monitor the real time activities of your machines and schedule production on each machine.

www.realvision.cc

Flexibility Means Functionality

webDNC™ consists of four modules:

DNC Assist™

Takes all the work out of controlling and managing your DNC files. DNC Assist works in the background gathering information and feeding it to your choice of database - Oracle, MS SQL or X-Base.

DNCView™

Gives instant access to the tape definition information - Rev, part number, tool list, job info ... etc. by login to the company intranet with any internet browser. (A stand alone application for viewing is available for those companies that do not have an intranet.)

Programmer Assist™

Gives the NC programmer a set of tools to fully utilize all the features webDNC offers. Build info and tool headers, build a tool database, select tools, utilize the program number manager monitor machine activity and view NC file stats.

RemoteDNC™

Is a full featured robust LAN based 32 bit DNC server. Supporting up 256 machines per PC while running in the background. RemoteDNC uses an interactive command language that allows personnel to:

Request programs, display program list, check tape definition info, display tool list, request tool offset blocks, download individual tool offsets, record part counts and cycle times, send E-mail notes and comments.
